

SUBMODULARS

- ▶ Submodules are meant for different projects you would like to make part of your source tree
- ▶ Project history stays separate. You cannot modify submodule from parent.

▶ **Better approach...**

- ▶ Add a remote for the other project and use the subtree merge strategy

▶ **Subtree merge strategy**

- ▶ The idea of the subtree merge is that you have two projects, and one of the projects maps to a subdirectory of the other one and vice versa.
- ▶ The child project stays in it's own branch
- ▶ `git read-tree --prefix=rack/ -u rack_branch`
- ▶ <https://git-scm.com/book/en/v1/Git-Tools-Subtree-Merging>

TEAM BRANCHING STRATEGIES
